Easy-to-Use

Remove the swab and test device from their packaging.

01

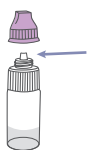

Tilt your head back. Gently insert the swab about 1 inch into one of your nostrils. Twist for 5 seconds. Repeat with your other nostril.

02

Remove the top half of the vial cap to expose the dropper tip.

05

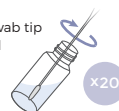

Hold the vial vertically. Squeeze and drip 3 drops of the solution into the circular opening of the test device.

06

The Buffer Solution Vial cap is composed of two parts. Remove the entire cap. Stir the swab into the buffer solution by twisting the swab back and forth 20 times. Ensure that the swab tip is fully submerged in the solution.

03

Close the entire vial cap tightly. Immediately perform Steps 5-7.

04

Leave for 20 minutes and read the results. Do not read after 25 minutes. Refer to 'Interpreting Your Results' section below.
